Dr. Hawis Madduppa of the Department of Marine Sciences and Technology (ITK) IPB has successfully published a book entitled "Bioecology and Biosistematics of Reef Fish and". This book of 373 pages is about techniques of genetic sampling and monitoring of coral reef fish, fish identification guides in Indonesia as well as several case studies in the Thousand Islands. The book, published in May 2014 by IPB press, is part of a study of reef fish started about ten years ago. "Collection of information and data was in 2004 and is coupled with the results of recent research that we have conducted" said Head of the Laboratory of Biodiversity and Marine Biosistematics of IPB. "Information is taken from various small and big islands across Indonesia," added the man, who was born in Watampone, South Sulawesi. (Mtd)
